positive regulation of defense response
cytokine−mediated signaling pathway
small molecule biosynthetic process
regulation of innate immune response
positive regulation of cytokine production
response to virus
regulation of inflammatory response
regulation of apoptotic signaling pathway
response to molecule of bacterial origin
leukocyte migration
defense response to virus
response to lipopolysaccharide
leukocyte proliferation
cellular response to biotic stimulus
cellular response to molecule of bacterial origin
positive regulation of canonical NF−kappaB signal transduction
cellular response to lipopolysaccharide
response to alcohol
extrinsic apoptotic signaling pathway
cytoplasmic translation
response to tumor necrosis factor
response to toxic substance
positive regulation of inflammatory response
response to ketone
regulation of extrinsic apoptotic signaling pathway
response to type II interferon
negative regulation of extrinsic apoptotic signaling pathway
cellular response to interleukin−1
negative regulation of viral process
negative regulation of viral genome replication
