GO BP enrichment: upregulated genes
cytokine−mediated signaling pathway
positive regulation of defense response
positive regulation of cytokine production
regulation of innate immune response
response to virus
immune response−activating signaling pathway
adaptive immune response
regulation of inflammatory response
response to molecule of bacterial origin
positive regulation of response to biotic stimulus
positive regulation of innate immune response
defense response to virus
response to lipopolysaccharide
canonical NF−kappaB signal transduction
leukocyte mediated immunity
positive regulation of cell activation
adaptive immune response based on somatic recombination of immune receptors built from immunoglobulin superfamily domains
positive regulation of leukocyte activation
regulation of canonical NF−kappaB signal transduction
cellular response to biotic stimulus
lymphocyte mediated immunity
cellular response to molecule of bacterial origin
cellular response to lipopolysaccharide
regulation of adaptive immune response
positive regulation of inflammatory response
humoral immune response
response to type II interferon
regulation of viral process
negative regulation of viral process
negative regulation of viral genome replication
