KEGG enrichment: downregulated genes
Ribosome
Coronavirus disease
Diabetic cardiomyopathy
Parkinson disease
Thermogenesis
Chemical carcinogenesis − reactive oxygen species
Carbon metabolism
Non−alcoholic fatty liver disease
Oxidative phosphorylation
Biosynthesis of cofactors
Retrograde endocannabinoid signaling
Pyruvate metabolism
Valine, leucine and isoleucine degradation
Glycolysis / Gluconeogenesis
Fatty acid metabolism
Glyoxylate and dicarboxylate metabolism
Propanoate metabolism
Arginine and proline metabolism
Citrate cycle (TCA cycle)
Amino sugar and nucleotide sugar metabolism
2−Oxocarboxylic acid metabolism
Alanine, aspartate and glutamate metabolism
Steroid biosynthesis
Terpenoid backbone biosynthesis
