GO BP enrichment: upregulated genes
response to type II interferon
response to molecule of bacterial origin
cellular response to biotic stimulus
cellular response to lipopolysaccharide
cellular response to molecule of bacterial origin
response to lipopolysaccharide
adaptive immune response
positive regulation of cell activation
adaptive immune response based on somatic recombination of immune rece
leukocyte mediated immunity
positive regulation of leukocyte activation
regulation of adaptive immune response
lymphocyte mediated immunity
positive regulation of cytokine production
immune response−activating signaling pathway
humoral immune response
positive regulation of inflammatory response
regulation of inflammatory response
cytokine−mediated signalingpathway
innate immune response
response to virus
positive regulation of response to biotic stimulus
positive regulation of defense resp
positive regulation of innate immune response
virus
canonical NF−kappaB signal transduction
negative regulation of viral process
regulation of viral process
negative regulation of viral genome replication
regulation of canonical NF−kappaB signal transduction
